Your new HDX-78C-VET kit includes:

HDX Displays

Universal Sender Pack

(5) 1" Screws

(3) Block-Off Lenses

Control Box

Clock Harness

(2) Main Harnesses

Y Harness

Installation

1. Remove the stock main gauge cluster and the center gauge cluster from the dash and save all center gauge hardware for reassembly.

Manual # 650661

2. Remove the stock gauge assembly from the center gauge bezel; the only items to be reused are the front bezel and the gauge mounting hardware. Now is a good time to clean or refinish the bezel.

3. Peel the paper off the two block-off lenses needed (636234-A and 636234-B) and place them shiny side down in the two rectangular openings. Use silicone to hold them in place and avoid handling until the silicone has cured.

4. With the block-off lenses in place, position the HDX center gauges over the back of the center bezel and secure the system by using the four (4) stock mounting screws.

5. Attach a main harness and the clock harness to the back of the HDX display. Carefully route the other ends of the main harnesses to the control box mounting location as the display is installed into the dash using the factory hardware.

6. Connect the main harness and the buzzer (optional for audio feedback) to the back of the HDX main display; carefully route the other end of the main harness to the control box mounting location as the display is installed into the dash using the five (5) supplied 1" screws.

7. Connect the provided Y harness to the control box so both main harnesses can be connected.

8. Refer to the main manual for wiring instructions to complete the HDX installation.
