(1) 36" CAT5 Cable

(8) 6-32 Flathead
Screws

Ford Speed
Adapter

Control Box

Installation

1. First you will need to remove the stock gauge cluster. To do so, remove the stock bezel by removing the eight (8) Phillips screws on the top and bottom edge as indicated in the photo. Also disconnect the wiring and speedometer cable on the back side. Retain hardware for reassembly.

- Remove the stock gauge cluster from the bezel by removing the eight (8) mounting screws. For a plastic gauge bezel, retain the original hardware for reassembly. For a steel gauge bezel, use the hardware included with the kit.

- Mount the VHX system to the gauge bezel. For the plastic bezel, use the stock eight (8) screws mounting from the backside as shown in the picture below on the left. For the steel bezel, use the provided eight (8) 6-32 x 3/8" black screws from the front as shown below on the right. Make sure to partially thread all screws before final torquing to perform proper alignment for all mounting points.

- As you re-install the gauge bezel to the dash using the stock hardware, attach the provided 36" CAT5 cable to the back of the VHX system.

5. Refer to the main manual for wiring instructions to complete the VHX installation.
