Sender Pack**

Installation Manuals

Control Box

36" Main Harness

Installation

1. First, remove the stock gauge cluster from the dash. There are four mounting tabs on both the top and bottom of the bezel that secure the assembly to the dash. Next, remove and retain the seven screws holding the metal gauge housing to the bezel.

- Secure the GRFX system to the original bezel using the seven screws retained from the previous step.

- Connect the provided **36" Main Harness** to the back of the GRFX system. Carefully route the open end of the harness to the desired control box mounting location. If desired, a backup camera can also be connected using the available RCA input.

- Re-install the cluster into the vehicle using the factory hardware and refer to the main manual for wiring instructions to complete the GRFX installation.
