Control Box

(6) #8-32 Screws

Blackout lens

Clock Harness

## Installation

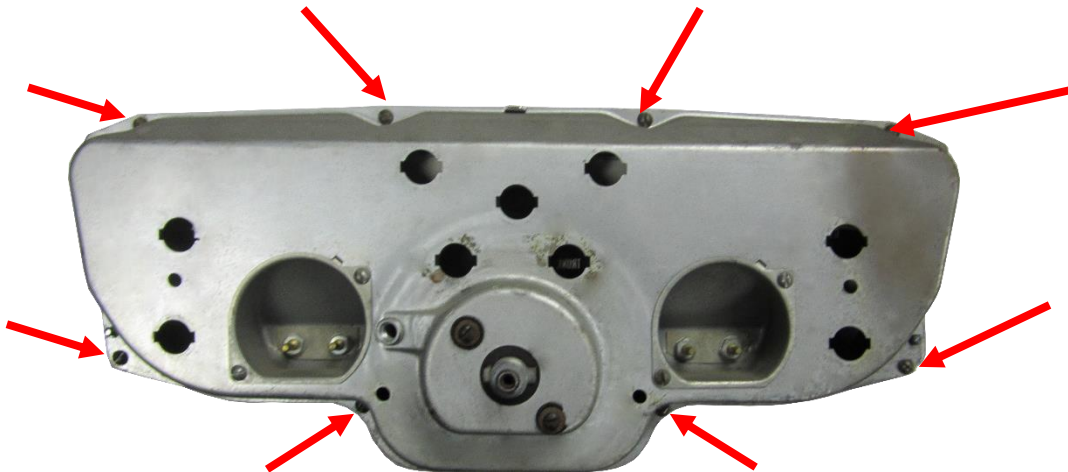

1. Remove the stock gauge cluster from the dash and save all hardware for reassembly.

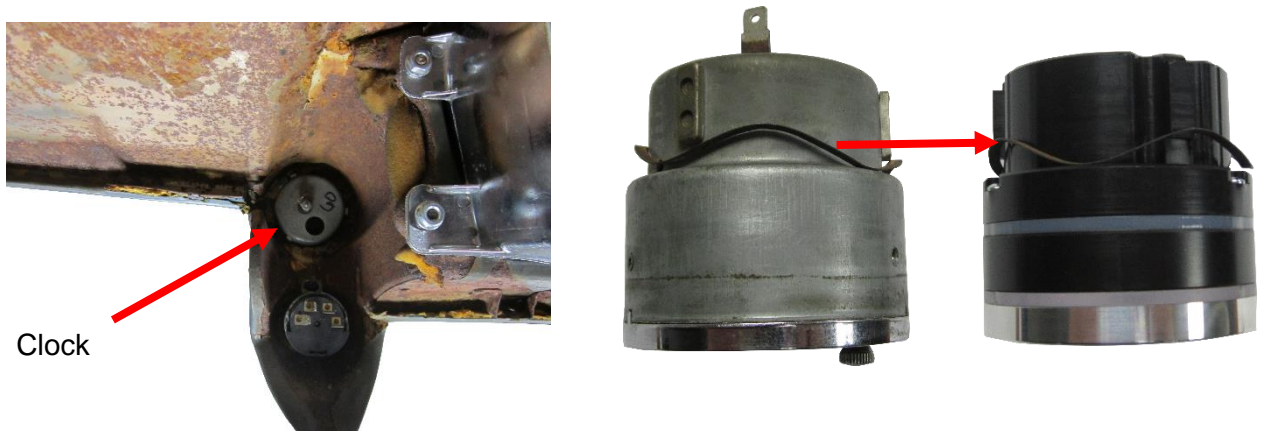

2. Remove and retain the four (4) nuts indicated below to completely remove the OEM bezel.

3. Remove the OEM bezel from the stock gauge by removing the eight (8) screws indicated below.

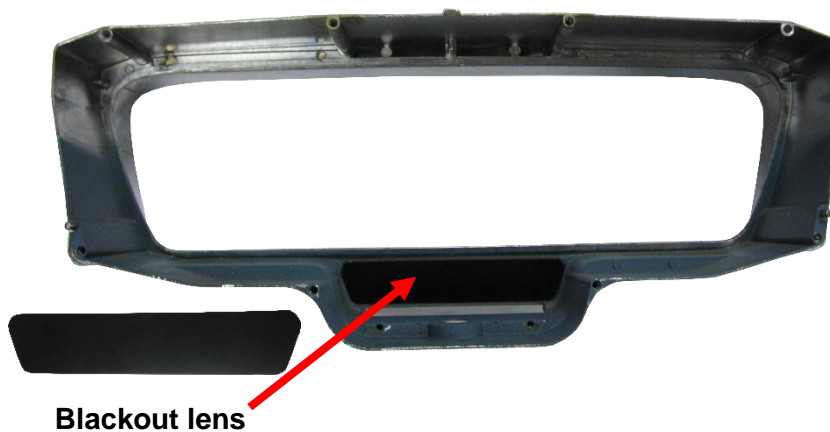

4. Looking at the back of the gauge cluster; remove the clock by rotating the clock ¼ turn in a clockwise direction until the mounting tabs release and the clock can be pushed out. Also remove the stock spring located below and attach to the RTX Clock gauge cluster.

5. Secure the RLC Clock by placing it into the clock bezel opening from the front orientated as shown below; rotate the clock in a counter-clockwise direction until the mounting tabs lock into place. If you do not have the spring attached from the previous step the clock will not fit correctly.

6. Peel the protective cover off the Blackout Lens and place it over the gear indicator opening with the protected side facing down and glue it in place using a black RTV silicone or similar to. Let the silicone fully setup and dry before moving on to the next step to prevent damage to the Blackout Lens.

7. Mount the RTX System to the stock bezel using the provided #8-32 screws in the locations below.

8. The cluster is now ready to re-install into the vehicle using the stock hardware from step #2.

9. Connect the 36" main cable to the back of the RTX system on the left. On the right will be the buzzer(optional for audio feedback). The 72" cable will connect to the installed clock gauge.

36" Main Cable

Buzzer

72" Clock Cable

10. Refer to the main manual and the clock manual for wiring instructions to complete the RTX installation.
